Stock cover (units-sold multiplier) by location

Stock-to-units-sold multiplier — a HIGH value means low velocity (potential overstock). Weeks of Cover (next table) uses last-4-week velocity and is more actionable for replenishment decisions. Units Sold covers 2026-06-21 → 2026-07-20 (30d, this card's own window — not the page filter).

📄 Export CSV

LOCATION	COUNTRY	UNITS SOLD	CURRENT STOCK	TOTAL SALES	COVER MULTIPLIER ⓘ ▾	WEEKS OF COVER ⓘ
Vivo Acacia	Uganda	906	2,743	KES 4.61M	3.03x	12.7w

Sell-Through Rate · by Location · 1 POS

Sell-through % = units sold (2026-06-21 → 2026-07-20) ÷ (units sold + current stock). Uses its own 30-day window, independent of the page date filter. Higher = stock is actually moving. 25%+ = strong · 12-25% = healthy · 5-12% = slow · <5% = stuck. Use this alongside Weeks-of-Cover to spot overstocked stores.

📄 Export CSV

Sort: Sell-Through % · high → low ▾

Vivo Acacia	
COUNTRY	Uganda
UNITS SOLD	906
CURRENT STOCK	2,743
TOTAL SALES	KES 4.61M
SELL-THROUGH %	24.8%
HEALTH	Healthy

† Stock-at-start-of-period is approximated as (current_stock + units_sold) — upstream doesn't keep historical on-hand; mid-period receipts aren't modelled yet.

Stock Aging · buckets by weeks-on-hand

Classifies every merchandise style by how long current stock will last at the last-4-week velocity. Phantom = stock ≥ 30 with zero sales in 4 weeks — dead money, transfer or clear immediately.

FRESH 157 13.1% · < 4w cover	HEALTHY 137 11.4% · 4-8w cover
AGING 230 19.1% · 8-16w cover	STALE 673 56.0% · > 16w cover
PHANTOM 5 0.4% · ≥30 stock · 0 sales/4w	

👻 Phantom Stock · 5 styles · 4,729 units locked up

Styles carrying ≥ 30 units with zero sales in the last 4 weeks. These are dead money — move them out or clear them. Acting on this list pays for itself within a quarter.
